

Collaborative Web of Things Platform (CoWeb)

Technology Overview

- Provides web plug-in framework for all physical-virtual things
- Supports dynamic things collaboration over web according to the current context
- Synchronizes associated things in physical world and virtual world

Core Technologies and System Architecture

Application Area and Advantages

- Dynamic thing collaboration applications over distributed physical and virtual things
 - Provides sharing/development/distribution/running infrastructure for IoT things and services
 - Applied to many vertical service domains such as smart home services, realistic gaming services, automatic carpooling services, public welfare services and etc.
